PERITONEAL DIALYSIS: GUIDELINES FOR DISPOSAL OF PERITONEAL WASTE

Home Waste Disposal and You

Proper waste disposal is a serious problem. Improperly disposed waste can harm your trash collector, your neighborhood children, and your environment. As a peritoneal patient, you have an important role to play in safeguarding your neighborhood by making certain your waste is safely disposed.

The regulations guiding what waste is allowed to go where can be complex. This brochure contains general guidelines on proper disposal of your peritoneal waste.

But First Some Good News

Both your state regulatory body and your local municipal government control where medical waste is allowed to go. But home generated waste is exempt from the difficult regulations such as storage, tracking and treatment requirements. All you are required to do is take a few simple precautions towards protecting your neighborhood trash haulers.

Part 1: Fluid

Your first waste to dispose of will be your drained dialysis solution. We recommend flushing it down the toilet.

Drain the effluent from your discarded CAPD system or from your cyclor drain bags following the policy set forth by your clinic. It may be easier for you to do this if you place a small hook or clip on the wall near the toilet, so that the hook/clip can hold the draining bag instead of you.

Part 2: All That Plastic

Between the tubing and the solution bags, peritoneal dialysis can generate a lot of plastic. Fortunately, all you need to do with it is place it in a heavy opaque plastic garbage bag, tightly knot the top of it, and dump it into your trash can. That's it! Disposed.

In these environmentally conscious days, it may seem like the earth friendly thing to do would be to recycle the plastic. Absolutely not! Never place your peritoneal dialysis waste in a recycling container or any container other than your own. Always dispose of it with your regular household trash.

Part 3: Masks, Dressing, and Gloves

This part is really easy! Your face masks, dressing and your helper's gloves are not medical waste. They can be thought of as household trash.

Part 4: Sharp Stuff

Needles and syringes are extra-special wastes. Some states do regulate home-generated sharps. Because they can puncture the skin, they pose a much larger threat than do your plastic tubing or bags. Your peritoneal dialysis facility may give you a sharps container or may recommend some other sturdy container for used needles and syringes. Place all used needles and syringes in this container. When the container is full, follow your facility's instructions to either return it to the facility or for proper disposal in the trash.

Part 5: Medical Vials

Just like your masks, dressings and gloves, medical vials are non-regulated. Your medical vials should also be thought of as part of your regular household trash, no different from an empty container of aspirin.

Caveats and Warnings

Unfortunately, people have a lot of misconception about medical waste. Your trash hauler may refuse to take your PD waste because it looks "medical" and "must be dangerous." If this happens, please contact your peritoneal dialysis home training nurse. Trash haulers do have final authority, but education should cure the misunderstanding.

All Done

Absolutely, that's all there is to it. If you have any more questions, please feel free to contact your peritoneal dialysis home training nurse.
